PRESS RELEASE

CADDIT Australia to sell TransMagic 3D CAD Translators

Sydney Australia, February 05 2008 – CADDIT announced a new partnership to distribute 3D translation technology for TransMagic, Inc. CADDIT is now the national distributor for all TransMagic "plug-in", desktop and workgroup solutions for CAD viewing, markup and translation. The agreement between TransMagic, Inc and CADDIT Pty Ltd benefits Australian companies that receive CAD files from different systems, but lack either the licenses or expertise "in house" to reliably read them all.

TransMagic, Inc. writes some of the world's best 3D CAD *translation* software, that is, software that can both view and convert files from one CAD format to another. The TransMagic team is widely respected around the world. They are certified partners with many of the world's most important CAD companies, like Autodesk, SolidWorks and Dassault Systemes. Australian business can now use the new TransMagic translation tools to easily and reliably read data from typically expensive systems like Dassault's "CATIA" PLM software suite, Unigraphics 3D CAD, Pro/Engineer, SolidWorks, Autodesk Inventor and many others.

TransMagic's easy-to-use, standalone interface does not require any CAD software. All of TransMagic's Desktop Suites offer 3D CAD file translation, geometry repair, file viewing, redline, cross-section, part volume, mass properties, measurement and collaboration functionality. Parts can also be exported from assemblies for use in any other 3D application. TransMagic ADVANTAGE includes a complete set of geometry and surface Repair tools. For a complete solid-to-solid interoperability solution, the MagicSURFACE features can quickly resurface openings or cover holes with appropriate levels of continuity.

"We are very pleased to be selected to distribute this product in Australia", said Ben Decker, CADDIT's business director. "It isn't just small machine shops and engineering consultants that need software like this. Many large companies prefer the simple interface and low cost, when compared with the overhead of purchasing multiple CAD systems." TransMagic customers include well-known industry names like Mitsubishi, Caterpillar, Boeing, General Electric and Sony. Nevertheless, CADDIT is working to make the software affordable even for small business doing serious design work. "There are several different modules and configurations we are packaging. The base ELEMENT suite will be priced less than half what most mid-range CAD systems cost."

"Modern manufacturing companies are faced with complex CAD data exchange problems on a daily basis," stated Todd Reade, President of TransMagic, Inc. "CADDIT has shown an exceptional understanding of how to solve these problems using TransMagic products. Australian manufacturing companies have a valuable resource in CADDIT."

CADDIT Pty Ltd, an Australian owned company, began marketing TransMagic to Australia in 2007. They provide their own level of technical support for this and many other CAD CAM CAE products. Their head office is located in the Liverpool Fairfax Building in western Sydney. They can be contacted via their website at http://www.caddit.net .

TransMagic, Inc. is a leading worldwide developer of 3D CAD translation software products. They are based in Westminster, Colorado, USA and can be contacted via their website at http://www.transmagic.com/contact.html .
