PRESS RELEASE

progeCAM 2008 CAD CAM CNC Software Released by CADDIT.net

Sydney Australia, March 25 2008 – CADDIT announced the world-wide release of their newest IntelliCAD integration project, progeCAM CNC 2008. progeCAM bundles two key long-standing packages: progeCAD 2008 Professional and Dolphin PartMaster CNC. Engineers move from CAD to CAM using a special IntelliCAD module from CADDIT that seamlessly combines the two powerful applications at one special price.

[progeCAM](#) is one complete software bundle for taking ideas from concept sketch to design, detailed drafting and final part CNC manufacturing. progeCAM seamlessly integrates two robust technologies, Dolphin PartMaster CNC and progeSOFT IntelliCAD. An integration module callable from within progeCAD's design interface allows users to select geometry and then choose whether that geometry requires preprocessing within CAM space before finally post processing the G-Code from PartMaster CAM required for actually cutting your design.

progeCAM comes in two major versions with several additional options. **progeCAM Basic** is an affordable entry-level 2D mini milling package suitable for hobby CNC, table routers, woodworking and more. Serious manufacturers should try progeCAM Professional. **progeCAM Professional** offers four options: Mill, Lathe, Wire EDM or all three together. It offers maximum flexibility with 3D back plotting, toolpath macros, DNC functionality, custom post processors and other enhancements for machinists. All versions are stand alone solutions that do not require additional software. *progeCAM Professional* will only be available in Australia, New Zealand and surrounding region.

Many businesses require a low cost design solution that is fast, flexible and easy to use. progeCAM is ideal for wood working shops, metal and laser cutting for both domestic and industrial products. Some of these include furniture, OEM aftermarket automotive products, building maintenance and supply, electrical fittings, custom jig, test and fixture development and other custom manufacturing requirements.

Because progeCAM includes progeCAD, users also have complete AutoCAD® style drafting functionality and DWG 2008 compatibility with other modern CAD systems. This also allows users to take direct advantage of the millions of free downloadable AutoCAD® blocks for use in their CNC designs at a fraction of the normal cost. progeCAM couples as a documentation system with full ISO, DIN and ANSI drafting supporting XREFs and Microsoft OLE document embedding. progeCAM offers a free 30 day trial download on the progeCAM website.

All progeCAM users can choose additional options such as DNC Communications, Upgrades and support. progeCAM users truly enjoy the best of both worlds at minimal software cost: robust AutoCAD® DWG 2008 interface with industrial strength CNC software. progeCAM saves machinists' time by seamlessly linking the CAD and CAM aspects into one. progeCAM is available worldwide from CADDIT.net (<http://www.caddit.net>) and their certified resellers.
